

Tapered Bearing Race Puller - Removes LM07097 & LM44610 Races

R230

Details

R&R Products developed a special line of tools to remove tapered bearing races from rollers, gear boxes and the outer ball bearing races left inside roller ends, in case of a catastrophic bearing failure. The R&R Puller contains a mandrel and spreader which secures behind the tapered bearing race or to the inside ball bearing groove. The tube assembly, which contains its own tapered bearing pulling system, is then placed over the mandrel and spreader to easily remove the outer race. Mandrels and spreaders are manufactured by R&R Products from high carbon chromium vanadium steel and heat treated for maximum strength.

Puller Fits LM07097, and LM44610 Races

- Puller Fits LM07097, and LM44610 Races
- Solid steel construction
- Internal bearing system for easy pulling
